From 1/9/2020 to 28/02/2023

The PLANET FARMS LIFE project received funding from the European Union under Grant Agreement

# WATER LESS IS MORE

## REDUCE

Reduce by 50% the use of fertilizers

## SAVE

Save 13 million litres of water

## AVOID

Avoid the use of pesticides

## PRODUCE

Produce locally, everywhere

The global population growth (over 9 billion people in 2050) is in clear contrast with the current patterns of natural resource supply (agriculture accounts for approximately 70% of global freshwater use): it is imperative to find a way to feed the world of tomorrow.

The **PLANET FARMS LIFE** project proves that it is possible to produce high quality vegetables saving huge amounts of water and without using any pesticides, thanks to the technologies installed within our vertical farm.
